

## Application Specialist

*Does an outgoing specialist position with hands-on tasks across department in Development, Service, Sales, and Support sound exciting to you?  
Then you might be the new Application Specialist at SANI Membranes.*

As the Application Specialist at SANI Membranes, you will be an important part of the continuous growth and international introduction of our unique Vibro® Technology. Our technology is quickly gaining foothold across the bioprocessing and pharmaceutical industries and has a growing interest from food&bev, nanoparticles and dairy industries. By joining SANI Membranes, you will be taking part in an exciting journey to change the way micro and ultrafiltration is accomplished across upstream and downstream processes.

### Key responsibilities

As Application Specialist, your daily tasks will be diverse, but primarily lies within;

- Conduction customer feasibility tests, in-house or at customer site
- Process and product development
- Product start-up and support
- Supporting and partaking in commercial activities

You will be working closely with the R&D and sales department and will be getting a thorough introduction to our technology and our products.

At SANI Membranes, you will work with varying tasks at an exciting workplace, with a friendly and informal work environment, characterized by a flat organizational structure. Additionally, you are offered plenty of responsibility and opportunities to advance and develop.

The position is expected to have 10-30 travel days annually.

### **Use your experience from the pharma or food industry**

You have a background from pharma, biotech or academia, possibly as a Production Technician / Process Specialist / Scientist or in another position making you well-accustomed to upstream and downstream processes.

You are an outgoing person, structured in your work and you thrive in the dynamics of a growing company. It's an advantage if you have experience in membrane filtration.

### **A growing team of visionary professionals**

Vibro® Technology is used to build filtration solutions servicing a growing number of diverse industries. Our products are built using recyclable materials and serve as a milestone for many of our customers in accomplishing greener production, due to a drastically reduced energy consumption. Additionally, our technology enables our customers to achieve substantial improvements in yield, quality and process control.

Our technology is directly scalable all the way from small laboratory units to large production units, making our technology ideal for process development.

### **We are looking forward to hearing from you**
